CAREER OBJECTIVE

Results-driven Android Developer with 1+ year of experience building production-grade Android applications using Kotlin, MVVM, Clean Architecture, Retrofit, Room, Firebase, and Socket.IO. Experienced in creating scalable, high-performance mobile solutions across diverse domains, with a focus on code quality, maintainable architecture, and seamless user experiences.

EDUCATION

B.Tech in Computer Science and Engineering *2021 – 2025*
Shriram College of Engineering and Management, Morena (M.P.), India

SKILLS

Languages & Frameworks: Kotlin, Java, XML, Jetpack Compose, MVVM, Clean Architecture, Android SDK
Libraries & Tools: Retrofit, Room, Firebase, Socket.IO, Agora SDK, Google Maps SDK, Coroutines, ViewModel, LiveData, Navigation Component, Payment Gateways, AES Encryption, Wi-Fi Direct
Dev Tools: Android Studio, Git, GitHub, Bitbucket, Postman, Firebase Console

EXPERIENCE

Android Developer | Appsinvo Pvt. Ltd. *Oct 2025 – Present*
- Maintained and enhanced 6+ production-grade Android applications for real-world clients using Kotlin, MVVM, Clean Architecture, and Jetpack libraries, including ViewModel, LiveData, and Navigation Component.
- Connected RESTful APIs with Retrofit and added 5+ third-party services, including Firebase Authentication, Crashlytics, Cloud Messaging, Socket.IO, and payment gateways, across multiple client projects.
- Oversaw the app lifecycle—from requirements gathering through release—across 6+ Android projects, supporting timely launches and consistent quality standards.
- Worked with backend engineers, UI/UX designers, and QA testers to create scalable Android applications aligned with client requirements.

Android Developer Intern | Uptoskills *Sept 2024 – Dec 2024*
- Created core features for authentication and real-time data handling, reducing user drop-off by 25% and improving data-loading speed by 40%.
- Connected REST APIs for backend communication and achieved a 99% crash-free rate through debugging and testing.
- Partnered with designers and backend developers to align features with business goals in an agile environment.

PROJECTS

Credenta – AI-Powered Biometric & Vital Analytics App | *Kotlin • CameraX • ML Kit • Dagger Hilt • Coroutines/Flow • Retrofit • Room • Paging 3 • Google Play Billing • AWS S3*
- Launched Credenta on Google Play, featuring camera-based PPG signal acquisition and vital-sign, heart-rate, and stress/recovery analysis through custom DSP pipelines, FFT, band-pass filters, and heartbeat-variability analysis.
- Created an AI-powered decision-readiness platform that combines physiological signals with stock and mutual fund research, market news, fundamental data, and live market conditions to generate Ready, Pause, and Review signals.
- Added AstroFinance capabilities that combine Vedic birth-chart analysis with physiological and market signals to offer personalized daily decision-making windows, alongside on-device PDF report generation and Google Play Billing subscriptions.
- Designed secure data communication using ECDH P-256 key exchange, AES-GCM encryption, and ECDSA signature verification. Structured the app with MVVM, Dagger Hilt, Coroutines/Flow, Retrofit, Room, Paging 3, and AWS S3.

Multi-Service On-Demand Platform | Client Project *Kotlin • MVVM • Retrofit • Socket.IO • Google Maps SDK • Firebase Cloud Messaging • Room • Payment Gateway*
- Developed and maintained separate User and Driver Android applications for a multi-service platform supporting ride booking, pharmacy medicine ordering, and doctor consultations
- Implemented real-time ride tracking and bidirectional communication using Socket.IO, with route visualization, fare estimation, and navigation using Google Maps SDK.
- Integrated pharmacy ordering workflows, doctor consultation features, and payment gateway functionality to support seamless service transactions.

Print & Stationery E-Commerce App (Client Project) | *Kotlin • MVVM • Retrofit • Firebase • Room • Payment Gateway*
- Designed a multi-service Android app where users can select print services, upload documents in multiple formats, and purchase stationery through product listings, a cart, and checkout.
- Connected payment processing for in-app transactions, Firebase Cloud Messaging for order confirmations and delivery updates, Retrofit for catalog and order-management APIs, and third-party SDKs for document uploads.

Phone Clone App | *Kotlin • MVVM • Wi-Fi Direct • AES Encryption*
- Created a device-cloning app that establishes a peer-to-peer connection between two Android devices using Wi-Fi Direct, enabling data transfer without an internet connection.
- Applied AES encryption to protect transferred user data, including contacts, media, documents, SMS, and app data, with device discovery and pairing app data, with a seamless device discovery and pairing flow
